What we do during an insect bite rebalancing session

“The mosquito bites were my worse reaction. Not only did they cause golf-ball size welts in my arms or legs, but the itching!”

Do mosquito bites cause a golf-ball size swelling in your arm? Do bee stings cause your throat to close? Do ant bites cause you to itch that spot for a week?

Well, if you answered “yes” to any of the above questions, chances are that you have an allergic reaction to one or more of them.

As a little boy, growing up in Canada, I never, ever suspected that it was an allergic reaction that I was getting. The mosquito bites were my worse reaction. Not only did they cause golf-ball size welts in my arms or legs, but the itching! My Lord, the itching would literally go on for two weeks straight. I would scratch and scratch until they bled, then I would not scratch them anymore. Until the healing started, which would cause them to get extremely itchy again. So, I would scratch and scratch until the scab broke off and I would still scratch the open wound until it would grow a little bit bigger!

And to all parents out there, it really does not matter whether you tell your child to leave it alone, “Do not scratch it otherwise it will just make it worse!” I am telling this to all parents, the scratchy feeling is so great that we cannot help but to scratch it. It is like putting candy beside a child and telling her that she is not allowed to take it. We all know what will happen to that candy. It is the same thing that happens with mosquito bites.

That was then and this is now. I have been rebalanced for these mosquito bites and low and behold I do not get that golf-ball size lumps anymore. In fact, they are just mini-bumps that last all but half a day. To all those insect bite sufferers out there, including those that suffer horribly due to a bee sting and those who suffer the same consequences as I did due to ant bites, I want you to know that there is a better life out there.

We had a 12 year old boy who loved white water rafting. I mean, this was just about all he did during the summer months. When he was rafting, he would often get bitten by mosquitoes. Just like me, his bumps would swell up and he would scratch them for about a week. His mother heard about what I could do about mosquito bites and immediately checked him in. After only one session with me, he was able to enjoy the white water rafting again as his mosquito bites would not itch and they would last him about an hour!

Allergy Rebalancing – A four-step process... In the next section, I will describe to YOU the four-step process for alleviating your allergy symptoms. It does not matter what it is that you are allergic to. We are so confident the process works, that we are willing to guarantee the results.

“The testing, the rebalancing and the confirmation!”

Step 1: The testing.

Using a sophisticated computer system, we are able to test you for an infinite variety of items. The information (finger prints) of each item is digitally stored on this computer system. By attaching clips to both hands, the computer is able to send the information about each item to your body. It then records your body’s responses and we print the results. Next it’s on to step 2.

Step 2: Verification.

Based on the results we've obtained from step 1, we select from the computer the items to rebalance. After all items have been selected, we imprint a glass vial, filled with water and alcohol, with all of the items. With this vial, we are able to confirm your body's sensitivity to the items via a simple muscle test. By putting the test vial, let's say it contains pollens, up against your arm and then holding your ring finger and thumb together tightly (see Figure 1), we will test your allergic reaction

Figure 1

to the substance contained in the test vial. In this test, the vial is held up against your forearm and we will try to separate your finger and thumb. If they do separate, then you have an issue with the substance, otherwise, you do not! It's that simple.

Step 3: The elimination.

Connected to the computer is a special laser pen. We use this laser to transmit the information (finger print) of each item to your body using various acupuncture points. Note that there is no penetration of the skin by our laser. It is a painless procedure and is even safe for children! Also note that your body is doing the rebalancing—we're just the facilitator, helping to get things started and your body does the rest. The entire process takes approximately 15 minutes. Once completed, we go to step 4.

Step 4: The confirmation.

In this step, we repeat step 2. Using the muscle test, your body should now test strong during the re-test. And that's it! The entire process for new clients runs around one and a half to two hours. Returning clients are often 30 to 45 minutes.

“So what are YOU going to do?”

Now that you have the information, what are you planning to do about it? The average person has 40 allergy symptoms with or without them being aware of it. But now that I've given you some indication of what may constitute an allergic reaction perhaps I have done my job and you are aware of it. However, if you want to go one step further and you want to rebalance your body and alleviate your allergy symptoms, you can always find our telephone number by visiting our website at www.noallergiesplease.com.

If they do separate, then you have an issue with the substance, otherwise, you do not! It's that simple.
